

# Entry Date Update Transaction

*This chapter provides record formats to update an entry date.*

## RECORD DESCRIPTIONS

**Record Identifier DN01 (Input)..... ENU-3**

Record Identifier DN01 is a mandatory entry date update transaction input record that provides data pertaining to the district/port, entry filer code, entry number, and revised entry date.

**Record Identifier DN02 (Output)..... ENU-4**

Record Identifier DN02 is a mandatory entry date update transaction output record that provides data pertaining to the district/port, entry filer code, entry number, revised entry date, U.S. Customs and Border Protection (CBP) release date, message code, and narrative message.

## **Entry Date Update Transaction**

The Entry Date Update Transaction allows Automated Commercial System (ACS) users to correct an entry date when the actual entry date is other than the U.S. Customs and Border Protection (CBP) release date. CBP will use the revised date to compute the timeliness of entry summary presentation. This should eliminate unnecessary penalty cases for untimely filing where the actual entry date differs from the CBP date.

The revised date has no effect on duty computations. If a revised date affects the duty computations, it is the user's responsibility to retransmit the entire summary.

If the following conditions are met, the Entry Date Update Transaction can be used:

- The entry must be on file in ACS.
- The entry was not processed through line release.
- The revised entry date normally should be equal to or greater than the latest date of exportation on the entry. However, the entry date may be less than the export date.
- The revised entry date cannot be greater than the current date.
- The entry summary cannot be in CBP accepted status.

***Input:*** Record Identifier DN01 is a mandatory Entry Date Update Transaction input record.

The application identifier on Record Identifier B is DN. For additional information on Record Identifier B, refer to the Application Control chapter of this document.

***Output:*** Record Identifier DN02 is a mandatory Entry Date Update Transaction output record.

The application identifier on Record Identifier B is DS. For additional information on Record Identifier B, refer to the Application Control chapter of this document.

## Record Identifier DN01 (Input)

Record Identifier DN01 is a mandatory entry date update transaction input record that provides data pertaining to the district/port, entry filer code, entry number, and revised entry date. This record is repeated as often as necessary.

<b>Record Identifier DN01 (Input)</b>					
<b>Data Element</b>	<b>Length/ Class</b>	<b>Position</b>	<b>Status</b>	<b>Description</b>	<b>Note</b>
Record Type	2N	1-2	M	Must always equal 01.	
Entry District/Port	4N	3-6	M	A code representing the district/port of entry. Valid district/port codes can be queried through the Extract Reference File chapter of this document.	
Entry Filer Code	3AN	7-9	M	A unique code assigned by CBP to all active entry document preparers. The Entry Filer Code represents the first three positions of an entry number regardless of where the entry is filed. This code must be the same as the Entry Filer Code in the block control header record (Record Identifier B).	
Entry Number	9AN	10-18	M	The number assigned to the entry. For additional information on valid entry number formats, refer to Appendix E.	
Revised Entry Date	6N	19-24	M	The revised entry date in MMDDYY (month, day, year) format.	
Filler	56X	25-80	M	Space fill.	

## Record Identifier DN02 (Output)

Record Identifier DN02 is a mandatory entry date update transaction output record that provides data pertaining to the district/port, entry filer code, entry number, revised entry date, CBP release date, message code, and narrative message. This record is repeated as often as necessary.

<b>Record Identifier DN02 (Output)</b>					
<b>Data Element</b>	<b>Length/ Class</b>	<b>Position</b>	<b>Status</b>	<b>Description</b>	<b>Note</b>
Record Type	2N	1-2	M	Must always equal 02.	
Entry District/Port	4N	3-6	M	A code representing the district/port of entry. Valid district/port codes can be queried through the Extract Reference File chapter of this document.	
Entry Filer Code	3AN	7-9	M	A unique code assigned by CBP to all active entry document preparers. The Entry Filer Code represents the first three positions of an entry number regardless of where the entry is filed. This code must be the same as the Entry Filer Code in the block control header record (Record Identifier B).	
Entry Number	9AN	10-18	M	The number assigned to the entry. For additional information on valid entry number formats, refer to Appendix E.	
Revised Entry Date	6N	19-24	M	The revised entry date in MMDDYY (month, day, year) format.	
CBP Release Date	6N	25-30	C	The CBP release date in MMDDYY (month, day, year) format if it is on file in ACS; otherwise, space fill.	
Message Code	3X	31-33	M	A code identifying the error message.	
Narrative Message	30X	34-63	M	A narrative message indicating an error message exists.	1
Filler	17X	64-80	M	Space fill.	

### Note 1

Valid narrative messages are:

- **ENTRY NOT ON FILE** - No record exists for entry number.
- **WARNING - ENTRY DTE < EXPORT DTE** - The revised entry date is earlier than the latest export date. This is a warning, not an error. If all other validations have passed, the data will be accepted.

### Note 1 - Continued

- **DATE INVALID/MISSING** - The date is not in MMDDYY format or it is missing.

- **ENTRY DTE EXCEEDS CURRENT DTE** - The revised entry date is greater than the current date.
- **ENT SUMMARY IN CBP STATUS** - The entry summary is already in accepted status and it cannot be updated.
- **ENTRY LIQUIDATED** - The entry has been liquidated and it cannot be updated.
- **UPDATE INVALID FOR LINE- REL** - The entry was created via line release and it cannot be updated.
- **ENTRY CANCELLED** - The entry has been cancelled and it cannot be updated.
