# **Border Cargo Release**

*This chapter provides records that are required for border cargo release processing.* 

#### **RECORD DESCRIPTIONS**

**Record Identifier 0M (Input)..... .BCR-8** A conditional border cargo release record that provides data pertaining to the bill of lading information.

**Record Identifier 02 (Input)**...... BCR-10 A mandatory border cargo release line-item input record that provides data pertaining to country of origin, tariff number, and manufacturer identification (ID).

# **Border Cargo Release**

Border cargo release was developed specifically for use at land border locations. It differs from airport and seaport cargo release in that data elements present in air/seaport transactions do not exist in the border environment.

The elimination of these data elements has resulted in fewer and more concise detail records for border cargo release processing. These transactions consist of one header record and a line item record.

*Input*: Record Identifier 01 is a mandatory border cargo release header input record. Record Identifier 0M is a conditional border cargo release record for data pertaining to bill of lading information. Record Identifier 02 is a mandatory border cargo release line item input record. This record is repeated as often as necessary for multiple ultimate consignees or multiple tariff numbers. Other Government Agency data, if present, will follow Record Identifier 02. The application identifier on Record Identifier B is HN. For additional information on Record Identifier B, refer to the Application Control chapter of this document.

*Output*: Border cargo release Record Identifiers E01/02 are the only border cargo release transaction output records.

The application identifier on Record Identifier B is HS. For additional information on Record Identifier B, refer to the Application Control chapter of this document.

# **Record Identifier 01 (Input)**

This is a mandatory border cargo release header input record that provides data pertaining to the update action code, district/port of entry, filer code, entry number, mode of transportation (MOT) code, importer of record, bond type, surety code, ultimate consignee, date of arrival, and entry type.

| Data Element                            | Length/<br>Class | Position | Status | Description  | Note |
|---|------------------|----------|--------|--|------|
| Control Identifier                      | 2N               | 1-2      | М      | Must always equal 01.  |      |
| Update Action Code                      | 1A               | 3        | М      | A code representing the update action. Valid<br>Update Action Codes are:<br>A = Add<br>R = Replace<br>D = Delete   |      |
| District/Port of<br>Entry               | 4N               | 4-7      | М      | A code representing the district/port where the<br>goods are to be entered under either an entry<br>or immediate delivery permit. Generally, the<br>district code is the same as the district code<br>contained in the block control header record<br>(Record Identifier B); however, the port code<br>can be different. Valid district/port codes can<br>be queried through the Extract Reference File<br>chapter of this document. |      |
| Filer Code                              | 3AN              | 8-10     | М      | A unique code assigned by the U.S. Customs<br>Service to all active entry document preparers.<br>The Filer Code accompanies an entry number<br>regardless of where the entry is filed. This<br>code must be the same as the Filer Code in<br>the block control header record (Record<br>Identifier B).   |      |
| Entry Number                            | 8N               | 11-18    | М      | The number assigned to the entry. For additional information on valid entry number formats, refer to Appendix E.   |      |
| Mode of<br>Transportation<br>(MOT) Code | 2N               | 19-20    | М      | A code representing the method (mode) of<br>transportation. Valid mode of transportation<br>codes for Border Cargo Release transactions<br>are 12, 20, 21, 30, 31, 32, 33 and 34.<br>Descriptions for these codes are listed in<br>Appendix B.   |      |
| Importer of Record                      | 12X              | 21-32    | М      | A code identifying the importer of record.   | 1    |
| Bond Type                               | 1N               | 33       | М      | A code identifying the type of bond.   |      |

| <b>Record Identifier 0</b>            |                  |          |        |  |      |
|---------------------------------------|------------------|----------|--------|--|------|
| Data Element                          | Length/<br>Class | Position | Status | Description  | Note |
| Surety Code                           | 3N               | 34-36    | C      | The surety code related to the bond. If the<br>Bond Type code is 9 (single entry bond), the<br>Surety Code is mandatory.   |      |
| Ultimate Consignee                    | 12X              | 37-48    | С      | A code identifying the ultimate consignee. If<br>there is only one ultimate consignee, it is<br>reported in this record. If there are two or<br>more ultimate consignees, space fill this data<br>field and report the ultimate consignees in<br>Record Identifier 02. | 1    |
| Date of Arrival                       | 6N               | 49-54    | М      | A numeric date in MMDDYY (month, day, year) format representing the date of arrival.   |      |
| Entry Type                            | 2N               | 55-56    | М      | A code representing the entry type. Valid<br>entry type codes are listed in Appendix B.  |      |
| Entry/Immediate<br>Delivery Indicator | 1N               | 57       | 0      | A code of <i>1</i> indicates an immediate delivery transaction; a code of <i>2</i> indicates an entry transaction. This code is reserved for future use.   |      |
| Carrier Code                          | 4AN              | 58-61    | С      | A code identifying the carrier. This code is<br>usually listed on the bill of lading. If it is not<br>listed, the carrier should be able to provide it.<br>If the port is operational for AMS Rail, this<br>data element is required.                                  |      |
| Consignee Name<br>and Address         | 1A               | 62       | 0      | A code of <i>I</i> indicates that this entry transaction record will use a consignee name and address instead of a consignee number.   |      |
| Filler                                | 18AN             | 63-80    | М      | Space fill.  |      |

#### Note 1

Valid formats for the Importer of Record and Ultimate Consignee are:

| NN-NNNNNNXX  | Internal Revenue Service<br>(IRS) Number |
|--------------|--|
| YYDDPP-NNNNN | Customs Assigned                         |
| Number       |  |
| NNN-NN-NNNN  | Social Security Number                   |
| -CCCCCCCCCCC | Encrypted Number                         |
|              | (Ultimate Consignee Only)                |

In these codes, N = number, X = alphanumeric, YY = the last two digits of the calendar year when the number is assigned, DDPP = the district/port code where the number is assigned and C = character.

#### Note 1 - Continued

If the Importer of Record Number is in IRS format and the last two positions are blank, ACS converts the blanks to zeros so that the file search argument is consistent with the Customs Importer file. ACS output data may show the last two positions of the Importer of Record Number as zeros when two blanks were input.

Use of the old Customs-assigned number (NNNN-NNNN) expired July 1, 1992. All importer numbers with the old format will be placed in a void status.

# **Record Identifier 0M (Input)**

This is a conditional border cargo release input record that provides data pertaining to the bill of lading information.

| Record Identifier 0M (Input) |                  |          |        |  |      |
|------------------------------|------------------|----------|--------|--|------|
| Data Element                 | Length/<br>Class | Position | Status | Description  | Note |
| Control Identifier           | 2AN              | 1-2      | М      | Must always equal 0M (zero M).   |      |
| Filler                       | 12AN             | 3-14     | М      | Space fill.  |      |
| Master Bill Number           | 12AN             | 15-26    | М      | Master bill number as listed on the manifest.<br>If the number is less than 12 positions it is left<br>justified. Do not include spaces, hyphens,<br>slashes, or other special characters. A bill<br>number is not necessary for FTZ Type 06<br>entries.   | 1,3  |
| House Bill Number            | 12AN             | 27-38    | C      | House bill number as listed on the manifest.<br>If the number is less than 12 positions it is<br>left justified. Do not include spaces, hyphens,<br>slashes, or other special characters.  | 1    |
| Sub-House Bill<br>Number     | 12AN             | 39-50    | C      | Sub-house bill number as it appears on the manifest. If the number is less than 12 positions it is left justified. Do no include spaces, hyphens, slashes or other special characters.   | 1    |
| Quantity                     | 8N               | 51-58    | М      | The quantity that is associated with the lowest<br>level of the bill number being reported. It is<br>the smallest exterior packaging unit.   | 2,3  |
| Unit                         | 5X               | 59-63    | С      | The unit of measure on the bill of lading. The<br>standard generic unit of pieces (PCS) is<br>acceptable when there are multiple units of<br>measure associated with the bill of lading;<br>however, this does not necessarily relate to the<br>unit of measure associated with the tariff<br>schedule number in the Harmonized Tariff<br>Schedule of the United States Annotated. |      |
| Filler                       | 6AN              | 64-69    | М      | Space fill.  |      |

| Record Identifier 0M (Input)    |                  |          |        |   |      |
|---------------------------------|------------------|----------|--------|---|------|
| Data Element                    | Length/<br>Class | Position | Status | Description   | Note |
| Issuer of Master Bill<br>Number | 4AN              | 70-73    | С      | A code representing the Standard Carrier<br>Alpha Code (SCAC) of the party who actually<br>issued the truck or rail bill of lading. Do not<br>confuse the issuers of the bill with the<br>operator of the truck or train. For entry type<br>06 (Foreign Trade Zone), do not input an<br>issuer of Master Bill Number. | 3    |
| Filler                          | 7AN              | 74-80    | М      | Space fill.   |      |

#### Note 1

If the mode of transportation code is 30 or 31 (truck), the bill of lading number must be reported.

#### Note 3

If the port is operational for Rail AMS, these data elements are required.

#### Note 2

If the transmission is for a straight bill of lading, the quantity is the bill of lading quantity. If the transmission is for a House Bill of Lading, both the Master Bill and House Bill numbers are reported but the only quantity reported is the House Bill quantity. Similarly, if a Sub-house Bill is being reported, numbers for all levels of the bill would be transmitted; but, only the sub-house quantity would be sent.

# **Record Identifier 02 (Input)**

This is a mandatory border cargo release line item input record that provides data pertaining to country of origin, tariff number, and manufacturer identification (ID). If there is more than one tariff number or ultimate consignee, this record is repeated with the line-item data for each tariff number or ultimate consignee as often as necessary.

| Record Identifier 02 (Input) |                  |          |        |  |      |
|------------------------------|------------------|----------|--------|--|------|
| Data Element                 | Length/<br>Class | Position | Status | Description  | Note |
| Control Identifier           | 2N               | 1-2      | М      | Must always equal 02.  |      |
| Country of Origin            | 2A               | 3-4      | М      | An International Organization for<br>Standardization (ISO) country code<br>representing the country of origin. Valid ISO<br>codes are listed in Appendix B.      |      |
| Tariff Number                | 10N              | 5-14     | М      | A code listed in the <i>Harmonized Tariff</i><br><i>Schedule of the United States Annotated</i><br>(HTS) representing the tariff number.                         |      |
| Manufacturer ID<br>Code      | 16AN             | 15-30    | М      | A code identifying the manufacturer. For<br>information on determining the manufacturer<br>code, refer to Customs Directive 3500-13,<br>dated November 24, 1986. |      |
| Ultimate Consignee           | 12X              | 31-42    | С      | A code identifying the ultimate consignee.   | 1    |
| Line Item Value              | 10N              | 43-52    | 0      | The line item value in whole dollars.  |      |
| Filler                       | 28AN             | 53-80    | М      | Space fill.  |      |

#### <u>Note 1</u>

Valid formats for the Ultimate Consignee are:

| NN-NNNNNNXX                   | Internal Revenue Service<br>(IRS) Number   |
|-------------------------------|--|
| <b>YYDDPP-NNNNN</b><br>Number | Customs Assigned                           |
| NNN-NN-NNNN<br>-XXXXXXXXXXX   | Social Security Number<br>Encrypted Number |

In these codes, N = number, X = alphanumeric, YY = the last two digits of the calendar year when the number is assigned, and DDPP = the district/port code where the number is assigned.

#### Note 1 - Continued

If the Importer of Record Number is in IRS format and the last two positions are blank, ACS converts the blanks to zeros so that the file search argument is consistent with the Customs Importer file.

ACS output data may show the last two positions of the Importer of Record Number as zeros when two blanks were input.

Use of the old Customs-assigned number (NNNN-NNNN) expired July 1, 1992. All importer numbers with the old format will be placed in a void status.

### **Record Identifier E01/02 (Output)**

This is a mandatory border cargo release output record that provides data pertaining to the district/port of entry, filer code, entry number, message code, narrative message, and ultimate consignee. Filers who have elected not to receive acknowledgment of border cargo release transactions will receive this record only for error conditions. The record where the error occurred (Record Identifier 01 or 02) will be shown in positions 2-3 of this record. If there are errors in the ultimate consignee numbers, this record will be repeated for each ultimate consignee error condition.

| Record Identifier E01/02 (Output) |                  |          |        |  |      |
|-----------------------------------|------------------|----------|--------|--|------|
| Data Element                      | Length/<br>Class | Position | Status | Description  | Note |
| Control Identifier                | 1A               | 1        | М      | Must always equal E.   |      |
| Record Type                       | 2N               | 2-3      | М      | Must always equal 01 or 02 indicating which record contained the error.  |      |
| District/Port of<br>Entry         | 4N               | 4-7      | М      | A code representing the district/port of entry.<br>Valid district/port codes can be queried<br>through the Extract Reference File chapter of<br>this document.   |      |
| Filer Code                        | 3AN              | 8-10     | М      | A unique code assigned by the U.S. Customs<br>Service to all active entry document preparers.<br>The Filer Code accompanies an entry number<br>regardless of where the entry is filed. This<br>code must be the same as the Filer Code in<br>the block control header record (Record<br>Identifier B). |      |
| Entry Number                      | 8N               | 11-18    | М      | The number assigned to the entry. For additional information on valid entry number formats, refer to Appendix E.   |      |
| Message Code                      | 3AN              | 19-21    | М      | A code identifying the message.  |      |
| Narrative Message                 | 30X              | 22-51    | М      | A narrative message that confirms the transaction was received error free or states the transaction was received with errors. A user may elect not to receive acknowledgments of error-free transmissions.   |      |
| Ultimate Consignee                | 12X              | 52-63    | С      | A code identifying the ultimate consignee.   | 1    |
| Filler                            | 17AN             | 64-80    | М      | Space fill.  |      |

#### <u>Note 1</u>

Valid formats for the Ultimate Consignee are:

| NN-NNNNNNXX                   | Internal Revenue Service<br>(IRS) Number   |
|-------------------------------|--|
| <b>YYDDPP-NNNNN</b><br>Number | Customs Assigned                           |
| NNN-NN-NNNN<br>-XXXXXXXXXXX   | Social Security Number<br>Encrypted Number |

In these codes, N = number, X = alphanumeric, YY = the last two digits of the calendar year when the number is assigned, and DDPP = the district/port code where the number is assigned.

#### Note 1 - Continued

If the importer of record number is in IRS format and the last two positions are blank, ACS converts the blanks to zeros so that the file search argument is consistent with the Customs Importer file. ACS output data may show the last two positions of the Importer of Record Number as zeros when two blanks were input.

Use of the old Customs-assigned number (NNNN-NNNN) expired July 1, 1992. All importer numbers with the old format will be placed in a void status.
